

Conclusions

- First investigations in view of GW and HEN coincidences
- Individuate scenarios for potential joint sources
- Common data sets are/will be available
- Collaborative efforts with IceCube and ANTARES being set-up, pathfinder for advanced detectors
- Propose procedure for the time/spatial coincidence of GW and HEN events

small FAR, allow to relax threshold, dig into backgd noise

- Synergy/complementarity with other multi-messenger projects (GW + γ -ray, low-energy neutrinos, optical follow-up, ...)
