ABCDGuoyPhase[ABCD_?MatrixQ, q_] := -Arg[ABCD[1, 1] +  $\frac{\text{ABCD}[1, 2]}{q}$ ]
ABCDspotSizeRatio[ABCD_?MatrixQ, q_] := Abs[ABCD[1, 1] +  $\frac{\text{ABCD}[1, 2]}{q}$ ]
ABCDGouyPhaseTelescope[rw_, gouy_, z_, z0_] :=
{{rw  $\left(\cos[gouy] - \frac{z \sin[gouy]}{z0}\right)$ , rw Sin[gouy] z0  $\left(1 + \left(\frac{z}{z0}\right)^2\right)$ },
{- $\frac{\text{Sign}[\sin[gouy]]}{rw z0}$ , If[Cos[gouy] == 0,  $\frac{\text{Sign}[\sin[gouy]]}{rw}$ ,  $\frac{1 - \text{Abs}[\sin[gouy]]}{rw \cos[gouy]}$ ]}}
```

GouyPhaseTelescope

GouyPhaseTelescope [{zFirst, zLast}, {w0, zw0}, train, k] returns the guoy phase shift acquired in the telescope and the spot size at the output with position zLast, starting with a beam at position zFirst which has a waist size w0 at the waist poition zw0. k is the wavevector. Train is a list of doublets consisting of focal length and lens position.

```
In[7178]:= 
Clear[GouyPhaseTelescope];
GouyPhaseTelescope[z : {zFirst_, zLast_}, inp : {w0_, zw0_}, train : {{_, _} ..}, k_] :=

{{ITMFocalLength, zITM + MichelsonAsymmetry/2}, {fLX, zLX}, {fL2, zL2}}, kk];
```

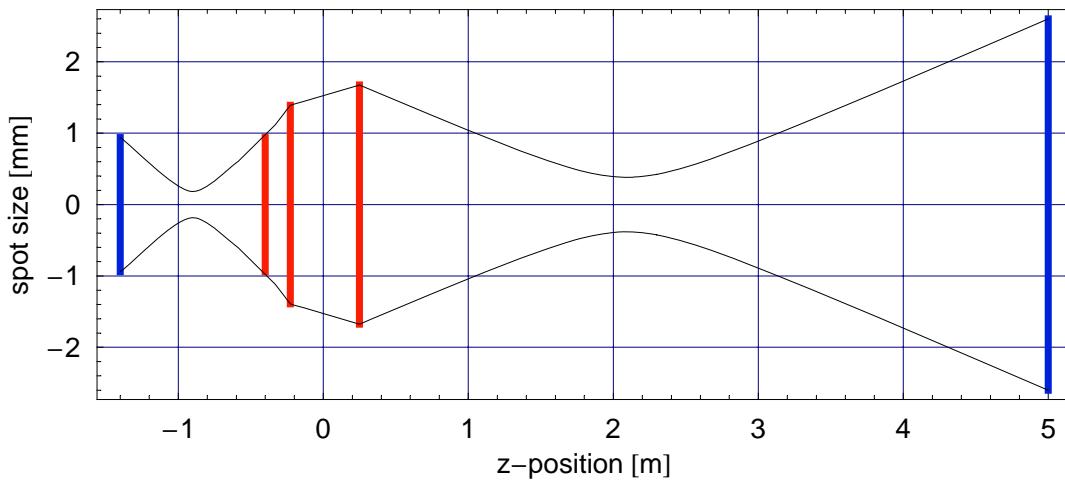

■ AS Port Beam Profile (Y-Arm of Michelson)

In[7315]:=

```
TelescopePlot[{zETM - MichelsonAsymmetry/2, 5.0},
{CavityWaist, zCavityWaist - MichelsonAsymmetry/2},
{{ITMFocalLength, zITM - MichelsonAsymmetry/2}, {fLY, zLY}, {fL2, zL2}}, kk];
```

Beam Profile

Probe Beam

The lens L3 is there to "mirror" the beam on the beam sampler, since we are propating the wrong way.

The lenses L4 and L5 are for mode matching to the AS port beam.

In[7485]:=

```
zL3 = 0.15; (* beam splitter for probe beam *)
fL3 = ff /. Solve[Lensing[{WaistLXY, zWaistLXY}, {ff, zL3}, kk][[1]] == WaistLXY, ff][[1]];
(* Beam propagate from other direction, so just "mirror" it *)
{WaistL3, zWaistL3} = Lensing[{WaistLXY, zWaistLXY}, {fL3, zL3}, kk];
zL4 = 1.291;
fL4 = 0.6806;
{WaistL4, zWaistL4} =
  Lensing[{WaistL3, zWaistL3}, {fL4, zL4}, kk];
zL5 = 1.414;
fL5 = -0.614;
{WaistL5, zWaistL5} =
  Lensing[{WaistL4, zWaistL4}, {fL5, zL5}, kk];
```

■ Find Mode Matching Solutuion

```
In[7494]:= ProbeBeamWaist[zzL4_, zzL5_] :=
  Lensing[Lensing[{WaistL3, zWaistL3}, {fL4, zzL4}, kk], {fL5, zzL5}, kk]; FindRoot[
  {ProbeBeamWaist[zzL4, zzL5][[1]] == WaistL2, ProbeBeamWaist[zzL4, zzL5][[2]] == zWaistL2},
  {{zzL4, zL4}, {zzL5, zL5}}, MaxIterations -> 400]

Out[7494]= {zzL4 -> 1.29046, zzL5 -> 1.41415}
```
