---

## Bad News:

- Many improvements didn't actually work in E5
- Some monitors have no visible output or have only logfile output
- Some monitors poorly documented
- Configuration files not tuned / up to date

# Engineering Run Investigations

## Good News:

- Lots of E2 reports presented at March LSC meeting and written up
- Lots of E3/E4 reports tomorrow
- E5 investigations underway

# Engineering Run Investigations

# Engineering Run Investigations

## Bad News:

- Not all E2 teams completed written reports
- Some E3/E4 efforts thin in reality (leader = “team”)
- Some E5 teams seem thin too

# More Issues

- Seismic noise at Livingston  
(see E3/E4 reports & Weiss/Coles/Greenwood talks)
- Making use of DMT triggers & other detector characterization info in LDAS  
(small group will meet Thursday afternoon)
- Evaluating triggers (efficiency, false alarms, deadtime)  
-> Need help from En teams and upper limits groups

# More Issues

---

- As always, need more people at sites  
-> E5 turnout at Hanford disappointing!
- Defining reference spectra and setting control room alarms based on deviations and transients  
(see Marka talk)
- Running DMT monitors BETWEEN engineering runs!
