

Analysis of Inspiral Hardware Injections

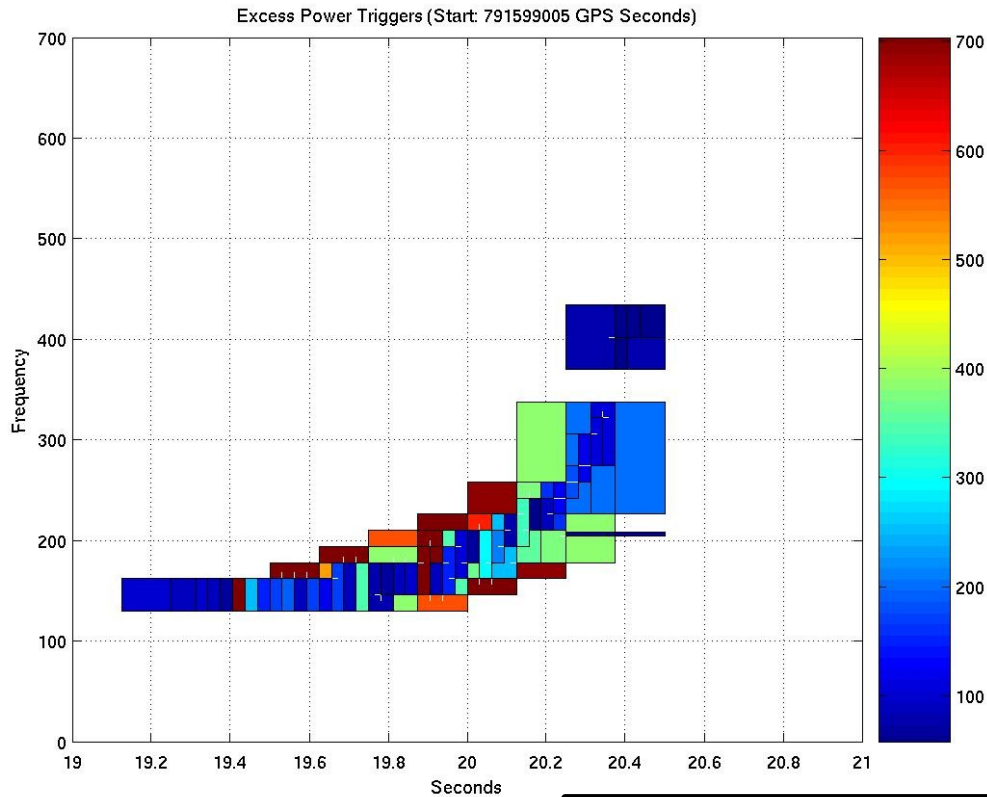

Patrick Brady
for
Inspiral Analysis Group

G050448-00-Z

- Steve Fairhurst (mostly) plus others helping out ...
- In E12, we tested for problems with hardware injections caused by sudden end of injection signal
- Chirp signal ending at innermost stable circular orbit frequency
- Preliminary results with more plus veto safety studies

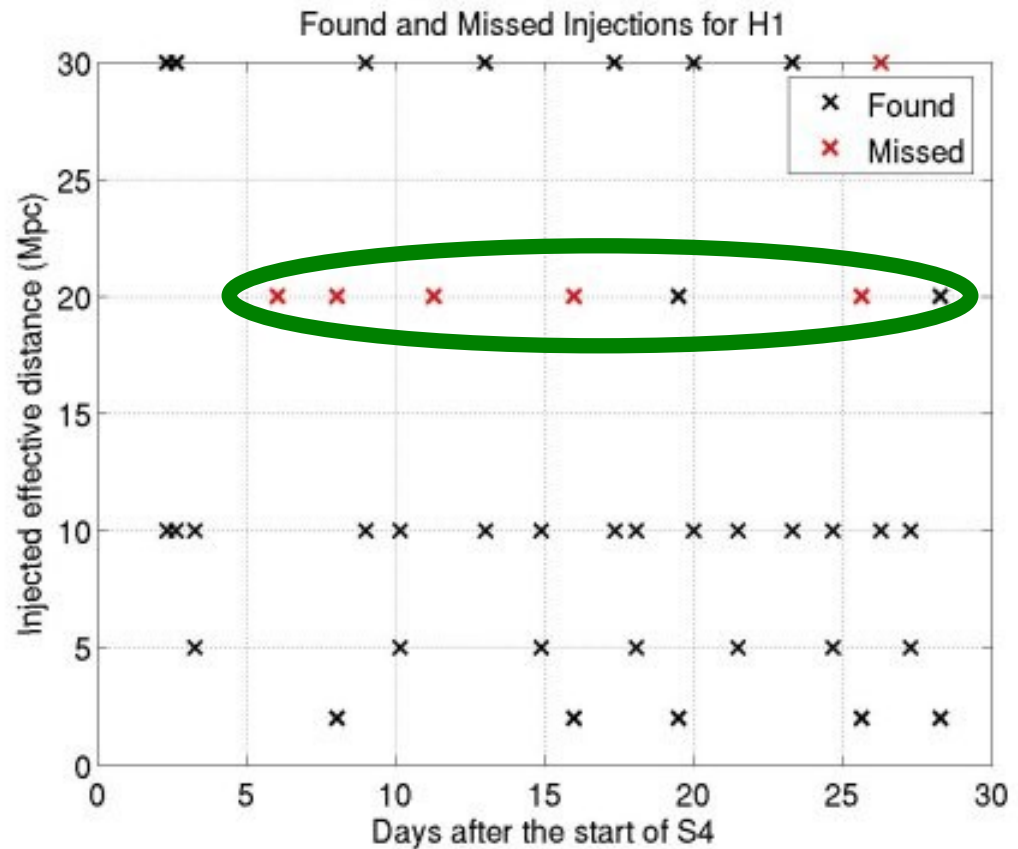

Generated using excess-power
by Cannon & Ray-Majumdar

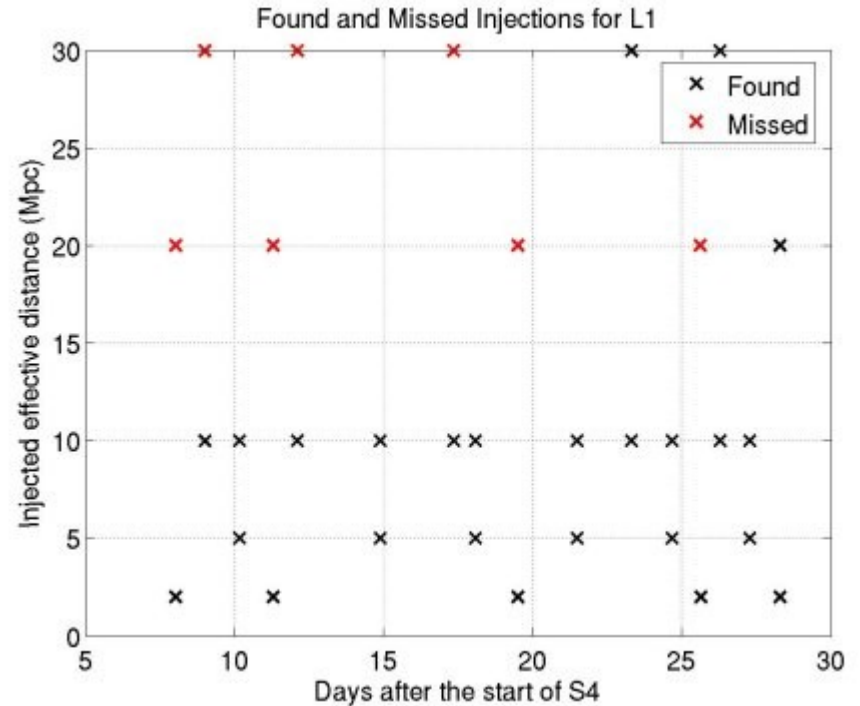

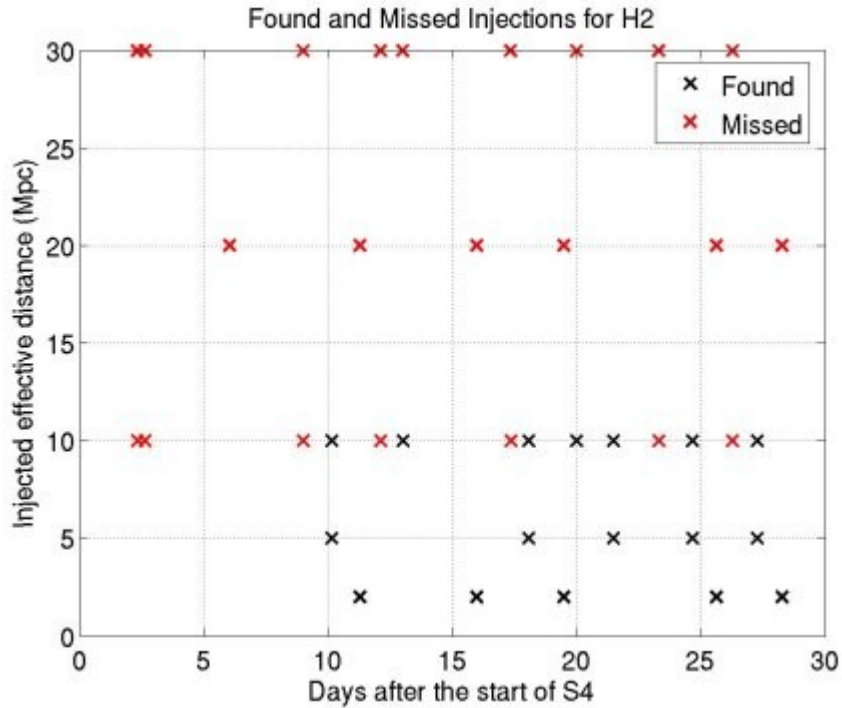

- Chirp signal forced smoothly to zero amplitude at innermost stable circular orbit frequency

Generated using excess-power by Cannon & Ray-Majumdar

- four 1.4-1.4 at 2, 5, 10, 20 Mpc
- two 3.0-3.0 at 10, 30 Mpc
- three 10-10 at 20, 40, 60 Mpc

- S4 Hardware & Software injections

- » Sine Gaussians, $f = 235\text{Hz}$, $Q = 9$

Lisa Goggin &
Duncan Brown

- Templates:

- » One template: $f = 235\text{ Hz}$, $Q = 9$

- » Full template bank: $50 < f < 2000\text{ Hz}$, $2 < Q < 20$
