

# LIGO S5 Reduced Data Set Generation March 2007

Gregory Mendell, LIGO Hanford Observatory

# LIGO

### What are the RDS frames?

- RDS frames are subsets of the raw data, with some channels downsampled
- Level 1 RDS (/archive/frames/S5/L1; type == RDS\_R\_L1)
  - separate frames for LHO and LLO:
    - LHO: 131 H1 channels and 143 H2 channels
    - LLO: 181 L1 channels
- Level 3 RDS (/archive/frames/S5/L3; type == RDS\_R\_L3)
  - DARM\_ERR, STATE\_VECTOR, and SEGNUM; separate frames for LHO and LLO.
- Level 4 RDS (/archive/frames/S5/L4; type == [H1|H2|L1]\_RDS\_R\_L1)
  - DARM\_ERR downsampled by a factor 4, STATE\_VECTOR, and SEGNUM; separate frame for H1, H2 and L1 data.

### LIGO Data Products

						Disk Space Tape Archiving @ 186 GBs/tape; Dual Copy						
				Data R	ate	1	Yr	1	Yr	Com	o. Ratio	Look-back
LHO	raw			9.063	MB/s	272	TBs	1800	tapes	1.7	on tape	~1 Month
LHO	Level	1	RDS	1.391	MB/s	42	TBs	460	tapes	1.2	in files	~most S5*
LHO	Level	3	RDS	0.117	MB/s	3.5	TBs	39	tapes	1.2	in files	all S5
LHO	Level	4	RDS	0.029	MB/s	0.87	TBs	10	tapes	1.2	in files	all S5
LHO	h(t)			0.266	MB/s	8.0	TBs	88	tapes			all S5
LHO	SFTs			0.032	MB/s	0.96	TBs	11	tapes			all S5
LLO	raw			4.406	MB/s	133	TBs	970	tapes	1.5	on tape	~2 Months
LLO	Level	1	RDS	0.750	MB/s	23	TBs	249	tapes	1.2	in files	~most S5*
LLO	Level	3	RDS	0.059	MB/s	1.8	TBs	20	tapes	1.2	in files	all S5
LLO	Level	4	RDS	0.015	MB/s	0.45	TBs	5	tapes	1.2	in files	all S5
LLO	h(t)			0.133	MB/s	4.0	TBs	44	tapes			all S5
LLO	SFTs			0.016	MB/s	0.48	TBs	5	tapes			all S5
Tota	als:			16.3	MB/s	490	TBs	3701	tapes	as a	above	all at CIT!

<sup>\*</sup> All of Level 1 RDS will not necessary fit on cluster node disks and/or inside the tape library at the sites. A copy of all data of all types is stored at the sites on tape, either in the tape library or off-line in tape cabinets.

### **Channel Lists**

# RDS Changes During S5

- 1. On Nov 4, H1:LSC-POY\_DC was changed to H1:LSC-POBS\_DC
- 2. On Nov 8, H2:LSC-SPOB\_MON was changed to H2:LSC-SPOB\_I
- 3. On Nov. 14, 2005 these channel were added at LLO:

L1:IFO-SV\_SEGNUM

L1:LSC-AS\_Q\_1FSR

L1:LSC-AS\_Q\_0FSR

4. On Dec. 13, 2005 these channels were added at LLO:

L1:LSC-ETMX\_CAL\_EXC\_DAQ

L1:LSC-ETMY\_CAL\_EXC\_DAQ 4

 Changes are discussed in Run, LDAS, CDS, and

DASWG meetings, and with

run coordinators, after

requests by individuals.

- Should discuss ways to set
- up standard procedures.
- 5. On June 15, 2006 new raw data channels were added to Level 1 RDS:

L0:PEM-RADIO ROOF at LLO

H0:PEM-RADIO\_LVEA\_H1 at LHO

6. On Feb. 23, 2006 increased the sample rate of LSC-DARM\_CTRL\_EXC\_DAQ in the Level 1 RDS frames from 4096 Hz to the full rate of 16384 Hz.

## Request for more changes to RDS channels?

- •Channels not in the RDS frames are at CIT in the raw frames on tape; can access in parallel in a few parallel streams from tape, it would take a while to process data from raw frames.
- •Do we want to add/remove channels to Level 1 RDS? (Must consider disk space within the lab and at the LSC sites; access time to the data on tape; cost of archiving.)
- •Do we want to regenerate Level 1 RDS, and/or regenerate a Level 2 RDS data set? (Note new h(t) frames may also carry extra channels for regenerating calibrated data.)
- •Can also consider generating custom RDS data sets at CIT.
- •Email proposed changes to gmendell@ligo-wa.caltech.edu

# Proposed change to RDS compression

A proposal to the LSC and S5 run coordinators to consider changing the compression of the RDS frames from gzip to zero\_suppress\_int\_float has been made at a recent S5 run meeting.

I have not heard if this was discussed further during the last run meeting: the issue is whether to implement this during S5 or after S5.

Both of these compression methods are already in the C and C++ frame libraries, but the latter is not in the fast frame library used by dtt. I have already run tests that show that zero\_suppress\_int\_float would reduce the size of the Level 1 frames by 30% and speed up output (and probably input) by around 20%.

# **END**

### How are RDS frames generated?

LDR

LDAS

Driver Script

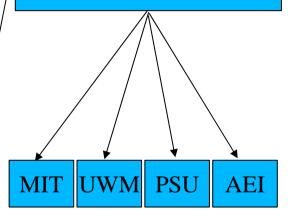

createrds.tcl uses
Ligotools LDASjob
package to submit jobs

get segments from LDAS diskcacheAPI

run LDAS createRDS jobs

RDS frames are written to archive filesystem

RDS frames transfer to CIT via LDR

SAMFS Archive:
