

What comes next for LIGO?

Planning the future of GW science AFTER detection

“Dawn Workshop” May 7-8 near Washington DC

Organizers: Beverly Berger, Laura Cadonati, Matthew Evans, Peter Shawhan, Stan Whitcomb

The dawn of GW astrophysics will change this field, both for data analysts and for instrumentalists; we need to be ready for that change.

To keep the schedule tight and the workshop focused, attendance will be limited, so your input is needed **BEFORE** the workshop.

Please contact Matthew Evans with your answer to the question:

How does the direction of your research depend on what we detect?

(Remote attendance will be made possible so that everyone can listen in!)
